

# Knurled Steel Pull Rolls for In-line Bander Upgrade

The previous In-Line Banders had a rubber roll against a steel pull roll. This offered good control of the sheet until the rubber roll began to wear. This upgrade features two opposing steel knurled pull rolls. A third knurled roll is then located just in front the pull rolls to offer additional sheet control.

The advantage of this upgrade is precise sleeve control and more consistent sleeve length and longer life. This upgrade can be ordered as a complete package or you can simply order knurled rolls to replace the existing rubber and steel rolls currently in your machine.

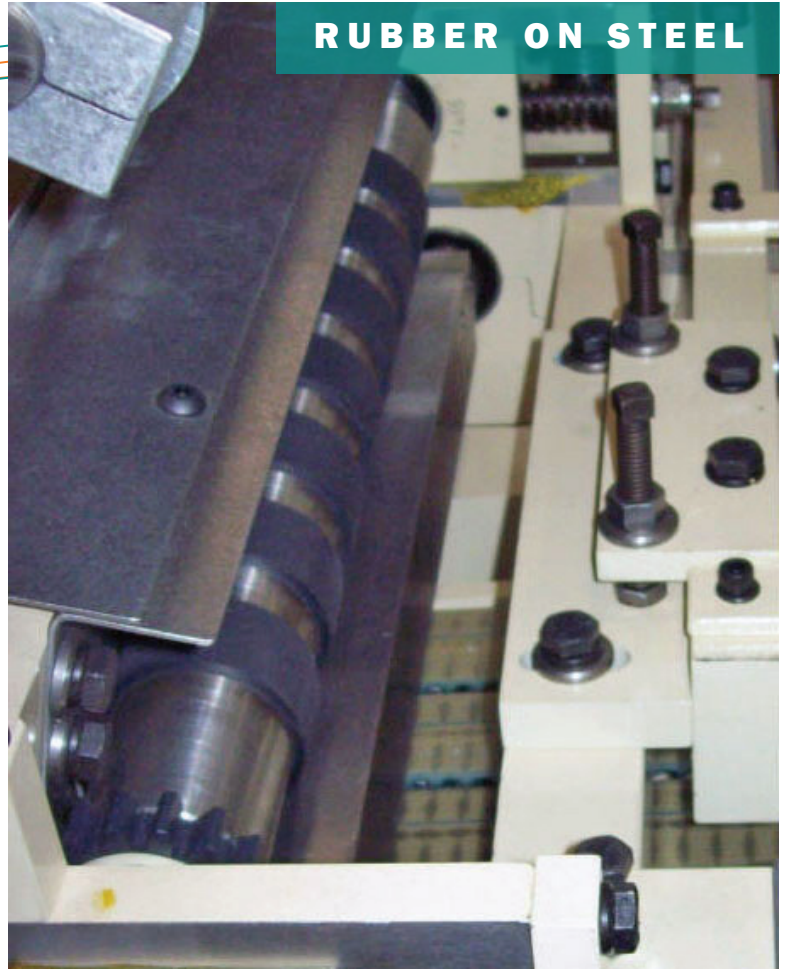

Includes:

- Dual Steel Knurled Pull Rolls
- Additional Knurled Roll
- Hand Wheels for Pull Rolls and Knife Roll (Optional)

Please contact your Bretting Manufacturing representative to discuss your upgrade needs.
