

Magnetic Lift Cylinders for the Upper Folder/ Sealing Bar Upgrade

The original design for the Upper Folder/ Sealing Bar on our Poly Wrappers utilizes a servo motor with a brake. Although this design is effective it is not conducive to movement with the safety circuit off.

The advantage of this upgrade is ease of movement in any condition. With the brake disengaged, the magnetic cylinders neutralize the weight of the seal bar making it easy to move up and down. They also allow the seal bar to remain suspended in any position.

Includes:

- Magnetic Cylinders
- Mounts

Please contact your Bretting Manufacturing representative to discuss your upgrade needs.

Some photos shown without guards.
Guards are provided and need to be in place before operation.
