

# MACHINE AUDIT PROGRAM

Bretting Manufacturing and Absolut Manufacturing offer a machine audit program.

- A proactive review and tune-up of your machine
- Improve production and prevent breakdowns
- Quarterly or biannual visits can be pre-arranged

## AUDIT

Our field service technician will audit your equipment from tip to tail. A discussion will follow regarding machine efficiency, parts needed, and possible upgrades. Any quotes requested will be listed on the findings report, and quotes will be sent as a follow-up.

## CRITICAL SPARE PARTS INVENTORY

A store room audit will help ensure access to the necessary parts in the event of a breakdown. Our technician will review the critical spare parts needed on-site to keep the machine running dependably.

## PREVENTATIVE MAINTENANCE/TUNE UP

A thorough review and tune-up of your equipment can improve production and prevent breakdowns. Our technician will discuss the importance of a maintenance schedule and advise on any preventative maintenance that's needed.
